

Fertilizer DVDs to be Distributed

The City of Sanibel has chosen the first week of January to send out its fertilizer DVD to residents, businesses and others as part of the City's education campaign to reduce the impact fertilizer has on water quality.

Although the DVDs, which explain the City's Fertilizer Ordinance, will be ready in December, the City believes it will be better to wait until after the holidays so the important information in the DVD won't be competing with holiday cards and sale advertisements. There will also be an even larger percentage of the Island's population present after holidays.

The Council has viewed the video on the DVD and the DVD is accompanied by an informational booklet.
